

## **AMENDMENT(S) TO THE SPECIFICATION**

**Please replace the paragraph beginning at page 19, line 32, with the following rewritten paragraph:**

The SS7-IP SDP-gateway 16 has configuration tables loaded therein for determining the IP address of the server 18 in charge of generating and sending the short messages (SM). The SS7-IP gateway sends an http message to said IP address indicating the short message identifier code (there may be, for example, one specific short message code for each HPLMN with which there is a dialling error notification service agreement and one general short message identifier code applied to HPLMNs with the operators of which there are no existing agreements for such service) and the recipient MSISDN of said short message. ~~A model for said http message is shown below:-~~

~~http://servidor\_sms.vodafone.es/mensajes\_imv/imv?msisdn=n\_destino&token=identificado  
r\_SMS~~
